

MEGAN TJANDRASUWITA

email: megantjandrasuwita@gmail.com

website: <https://megantj.github.io/>

EDUCATION

Massachusetts Institute of Technology
Ph.D. in Computer Science, GPA 5.0/5.0

2022 - Present

California Institute of Technology
B.S. in Computer Science, GPA: 4.0/4.0

2018 - 2022

RESEARCH INTERESTS

Analyzing and enhancing the emergence of human-like perception and reasoning in multimodal foundation models. Multimodal AI reasoning for vision, text, and code. Code generation to improve reasoning.

SKILLS

Multimodal learning • Large vision language models • Representation similarity analysis • Deep learning architectures

RESEARCH EXPERIENCE

Multisensory Intelligence Lab
Deep Learning Researcher

Oct 2024 - Present

Advisor: Professor Paul Liang

- Enhance spatial reasoning and chart understanding capabilities of multimodal foundation models.
- Develop pipeline to train MLP and Transformer models on different modalities, including image, text, audio.

- Extensively evaluate the emergence of alignment between unimodal encoders across varying levels of redundant information and heterogeneity between modalities.
- Experiments demonstrate a nuanced understanding of when cross-modal alignment predicts model performance. Conference paper published at *ICML 2025*.
- Curate social reasoning benchmark of mime performances without explicit language cues. Conference paper in submission to *NeurIPS 2025*.

Computer-Aided Programming Group

Sep 2022 - Present

Deep Learning Researcher

Advisor: Professor Armando Solar-Lezama

- Researched learning reusable, modular controllers for robots using a novel training objective.
- Developed ML pipeline involving imitation learning for pretraining neural network modules and reinforcement learning for transferring modules to different structures and tasks. Conference paper published at *NeurIPS 2024*.

Stanford Network Analysis Project, Stanford

Jun 2021 - Jun 2022

Deep Learning Researcher

Advisor: Professor Jure Leskovec

- Researched neurosymbolic methods for performing human-like concept recognition and reasoning in visual domains.
- Constructed policy architecture of agent that performs unsupervised object discovery and identifies relevant relations between concepts. Integrated recurrence in graph neural network (GNN) architecture to improve agent's long-term reasoning. Conference paper published at *NeurIPS 2022, ICML 2022 Beyond Bayes Workshop*.

Machine Learning Group, Caltech

Sep 2020 - Jun 2022

Machine Learning Researcher

Advisor: Professor Yisong Yue

- Employed program synthesis to generate human-interpretable programs that classify animal behavior based on laboratory datasets. First-authored paper published at the *CVPR 2021 CV4Animals Workshop*.

INDUSTRY EXPERIENCE

Oracle - Corporate Architecture

Jun 2020 - Sep 2020

Software Engineer Intern

- Applied machine learning algorithms to create a recommendation system that processes purchase requests from Oracle's employees. Achieved highly interpretable outputs through its ranking system and had a precision of over 80% on validation examples.

TEACHING EXPERIENCE

Caltech Teaching Assistant

Jan 2022 - Jun 2022

- Held office hours, graded problem sets, and prepared lecture notes for graduate-level computer science courses: "Machine Learning and Data Mining" (CS/EE 155) and "Advanced Machine Learning Methods" (CS/EE 159).

ACADEMIC SERVICE

Reviewer for *NeurIPS 2025, ICML 2025*

HONORS & AWARDS

NSF Graduate Research Fellowship (GRFP)	2022
MIT Stata Family Presidential Fellowship	2022
